Quaestio medica Cardin. agitanda disput. In Scholis Medic. die Jouis 5° maii D. Bartholomaeo Passart prudentiss. medico, Moderatore sapientissimo.

An In Thoracis et Pulmonum morbis Phlebotomia tutior.

Thorax et pulmones, vocis respirationisque instrumenta necessaria, et [illegible] calori innato, salubrrimi instar flabelli, et ab iniuriis externis [illegible] vitae principium maxime tuentur, cordis gratia (quod primum in homine vivit et ultimum moritur) à natura conformati sunt, [illegible] modo et appositi: Ille propria vi proprioque concitatur, pulmones [illegible] motus [illegible] hi molles, rari, calidique sicci, [illegible] alimento contrariaque [illegible] ratione quam reliquae partes aluntur, atque omnes ab [illegible] facultates imbecillas habent, utrique in medio [illegible] positi, faciles cum aliis [illegible] qui cum cerebro [illegible] [illegible] aut repletione affecto, afficiuntur: ab ascaridibus, hepatitide et [illegible] tussis (nunquam non affectis pulmonibus concita) movetur: ab utero [illegible] gignuntur. [illegible] morborum [illegible] faciles, quorum causam [illegible] tam periculosa symptomata, quam [illegible] actio non sit aliquando, quam admodum [illegible] tamque difficilis curatio, quam medicamentis [illegible] difficilis patet aditus.

Ut mutuas opes cor, pulmones et thorax sibi consitunt, ita communibus [illegible] affectionibus mox corripiuntur. Hinc causa aut hectica (frigida [illegible]) pulmones [illegible] siccatique marcescunt, et [illegible] febris [illegible] respiratione [illegible] [illegible] syncope lethalis saepe [illegible], et hectica frigiditas conciliatur: laboranti thoraci haud absimiles morbi [illegible] [illegible] [illegible] calor, [illegible] sanguinis (coloris et consistentia [illegible]) formidabile symptoma, ac in angusto pectore [illegible] inflammationem in [illegible] sanguine [illegible] anginam, et peripneumoniam [illegible] fluxione [illegible]. Ab his, et à pituitâ [illegible] humore suppuratio gignitur. [illegible] dolor pungens, pulsus [illegible] tussis ipsa pleuritidem indicant, [illegible] nisi [illegible] sputa [illegible] purgatio facta sit. In empyemata [illegible] palam ostendunt, et [illegible] sola aut [illegible] vitandam, cum [illegible] ab aliquo [illegible] malum [illegible].

Pulmones aut similarium morbum patiuntur, aut ab [illegible] superfluitatibus obstruuntur, inflammatione tumoreque praeter naturam corripiuntur, aut [illegible]. [illegible] inanis tussiendi necessitas sequitur, siquando [illegible] aut assumptorum, [illegible] humoris, aut [illegible] contagionis [illegible] ad expectorationem. [illegible] purgata, [illegible] tuberculi, [illegible], lapidis, atque etiam obstructionis causam [illegible] sanguinis [illegible] inflammatio et phlegmone: à bile erysipelas, à quovis humore [illegible]. [illegible] natura non [illegible] ad phthisim aut nulla [illegible] distillatio, [illegible] malignitas, quorum [illegible], anginae, pleuritidis, empyematisque [illegible] producerint [illegible]. Communis omnibus symptoma tussis, vocis [illegible], et dyspnaea [illegible] [illegible] malo, asthma, orthopnaeaque, (aliisque affectus acuti [illegible] consequuntur) ab inflammatione sputum [illegible] spumosumque (quale [illegible]) ab erysipelate biliosum: [illegible] pulmonis [illegible] portio maxime cum foetore procedit.

Aëris [illegible] contrarii [illegible], color [illegible] (in frigida rubicundior) [illegible] ratio. [illegible] [illegible] tussis, oppressio, spirandi difficultas obstructionis comites, tanto graviores apparent, quanto ipsa maior [illegible] qui gibbi [illegible] aut asthmatici [illegible] fiunt, moriuntur. [illegible] copia [illegible] materia notatur, [illegible] aliquid [illegible] declarat. Phyma, grando, et calculus, cum sint occulta vitia, vix [illegible] manifestantur indiciis, [illegible] [illegible] [illegible] dolore pulmonicos, qui haemorrhagia aut alio profluvio [illegible] non raro liberantur, [illegible] corporis, calor hecticus (cui aliae [illegible] tempore [illegible]) [illegible] acutus, oculi concavi, collapsa tempora, cutis circa frontem distenta, ungues curvi, capillorum [illegible], [illegible] insanabilem (non ob pulmonis motum) [illegible] declarant, [illegible] λεπτοῖς frigidis naturis, et autumno familiaris: ab hoc cum pueri [illegible] facilis, non ita puellae et mulieres quibus [illegible] morbo dedit initium et [illegible] à mortalibus [illegible].

Victus ratione [illegible], [illegible] instituto, [illegible] humidioribus et [illegible] admotis his morbis potissimum [illegible]. [illegible] contrario profligatur, quam [illegible] sola spiritus [illegible] sanat. Vinum [illegible] dulce [illegible] accommodatum, quibus quae [illegible], incidunt, attenuant, et [illegible] morbi causam (cui soli contrarietas [illegible]) omnino tollunt, [illegible] pharmaco aut [illegible] sollicitanda [illegible]: mutatione caeli [illegible] siccantibus, et glutinantibus, [illegible] curantur. Cucurbitulae phlebotomiae [illegible] initio [illegible] in frigidis affectibus, [illegible] distillatione [illegible], tutissimum [illegible]: [illegible] maximis [illegible], in [illegible] parte [illegible] toto [illegible], [illegible] obstructa, [illegible] [illegible] parte affecta (praesertim si ad caloris [illegible] producatur) [illegible] pro arbitrio [illegible]. Purgatio [illegible] [illegible] fortioribus medicamentis comparata [illegible] potest, [illegible] data sit, humoris et [illegible] spectanda [illegible] in hypochondriis et [illegible] partibus laborantibus suspecta, [illegible] febris, (cui nulla purgatio [illegible]) augetur.

Ergo In thoracis et Pulmonum morbis Phlebotomia tutior.

Ponebat Dominicus Bourgoing Lutetianus. 1575.
